REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The claimed subject matter in claims 1-13 is allowable because the prior arts of record fail to teach or fairly suggest the claimed:

"a method for determining the position of a constant frequency interval in a telecommunication signal, said method comprising the steps of:

a) receiving said telecommunication signal;

b) detecting an occurrence of said constant frequency interval in said telecommunication signal;

c) **obtaining a plurality of noise-reduced signal values by a noise-reducing processing of at least a part of said constant frequency interval in said telecommunication signal;**

d) **using said noise-reduced signal values for adapting a filter to the frequency of said constant frequency intervals;**

e) using said adapted filter to filter said telecommunication signal for generating values; and

f) **determining a predefined reference point of said constant frequency interval on the basis of said filtered output values** as in claim 1 and,

an apparatus for determining the position of a constant frequency interval in a telecommunication signal, said apparatus comprising:

an analyzer for detecting an occurrence of said constant frequency interval in said telecommunication signal;

a noise-reducing filter unit for obtaining a plurality of noise-reduced signal values by a noise-reducing processing of at least a part of said constant frequency interval in said telecommunication signal;
a coefficient generator using said noise-reduced signal values for adapting a filter to the frequency of said constant frequency interval;

said filter filtering said telecommunication signal for generating filtered output values; and

a position detector for determining a predefined reference point of said constant frequency interval on the basis of said filtered output values as in claim 9.

2. See element 36 for generating noise reducing value and coefficient generator 44 and Finite Input Response Filter 50 for filtering the signal to be used by the detector 54 which detects the position of the constant frequency burst signal in figure 2.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US patent numbers 5,199,047, 5,416,800 and 6,724,837 issued

Art Unit: 2631

to Koch, Frank and Zhou respectively disclose a transmission system having means for detecting the position of FCB signal.
